Lupin looks to hire talent in digital health, diagnostics, data science

Synopsis

"The pharma industry is very bullish on growth right now. We are focusing on ramping up for new-age roles like product development specialists, product design professionals, biotech experts, commercial product pricing skills, legal know-how in pharma," Mahadik told ET.

Pharmaceutical major Lupin is looking to step up its presence in India, with its hiring connected to new business divisions being launched.

The company is looking to onboard talent in digital health and medtech, along with consumer-facing diagnostics roles. It is also hiring data scientists and engineers across the board.

"All these roles are new requirements that mainly require a combination of medico and management skills. We have also come up with a new set of roles that are largely technical and are part-time," said Yashwant Mahadik, president - global human resources, Lupin.

Agencies
The firm is mainly hiring from medtech, healthtech, and fintech companies.
